

Ask Me About

Week of 2/19

shutterstock.com • 1213696837

- How I analyze the picture in my book after I've read the words and put it all together to tell more about my topic.
- How I can find the **topic** in my book (what the book is mostly about) and then give **details** that tell about my topic.
- How I use **BOLD** words in my writing so the reader knows the most important words in my book.
- How I can use a checklist to make sure I'm including all the important things I need to teach my reader.
- 2D and 3D shapes and how they are the same and different. A rectangle and a cube both have straight sides, but a cube has 6 faces, unlike a rectangle.
- Our plant experiment! We have learned that plants need water, air, sunlight and a home to live and grow. We've started growing some bean plants and now we're going to prove that they can't survive without them. We will give one plant sunlight and water, one plant only water, but no sun, a third plant with sun, but no water and the last plant with no "home". We'll see what happens over the next 2 weeks!!

Looking forward to seeing everyone at conferences! Hope you have a great weekend!
